Comment:

- I do not like the wording of reproductive toxicity being removed, cancer and reproductive toxicity should both remain due to them being different conditions, that can be fatal.
- The text about removing chemicals needs to have more stipulations, this will be abused by those who have stakes in the chemical of question.
- I also want the chemical in question to remain on the list, until the investigations are complete. This will confuse consumers into believing that these chemicals are safe.

I appreciate the OEHHA, looking out for consumers. Your staff are very well educated individuals and need to keep looking out for all people in California.

Sincerely,

Annie Rivera
