**Date:** Monday, September 28, 2015 11:19:09 AM

---

Hi there,

Please require glyphosate be labeled as a carcinogen. I highly support such a measure as I am a pet sitter and I already see dead bees dying on the sidewalks (I'm sure due to Glyphosate poisoning) where I walk dogs almost every day. This is a known carcinogen and it is destroying our ecosystems in addition to affecting our health.

Best regards,

Darlene Toalson  
A Pet's Paradise

**Date:** Monday, September 28, 2015 10:30:55 AM

---

Why is it that the U.S. seems always behind Europe in matters of health and sustenance. The Europeans have labeled glyphosate, and other poisons in combination with glyphosate as carcinogenic. Why are we different? Please categorize this pest control as the carcinogen that it is. Monsanto (and others) are spending millions to promote this pest control, and to promote GMO crops that permit increased use of it. Is their financial power unstoppable? It's not if you don't want it to be.

To Whom it May Concern:

I am writing to voice my support of the California state EPA's proposed plan to label products containing glyphosate as carcinogenic. With numerous studies now indicating that glyphosate is toxic to the kidneys and liver, even in small doses, it would be morally and ethically remiss to continue to sell these products to the public without warning them of the the risk posed to their health. It is essential that citizens be able to make informed decisions about the products they purchase.

Sincerely,

Allison Hogan

To all

There is a new energy in the planet and it has to do with integrity, beauty and elegance. One day we will look back and see the stupidity of drenching our food with pesticides, and loading people's bodies with chemotherapy and radiation and producing power in the crudest of ways thru atomic energy. Round up does not belong in our water, our bodies and our food. Profits for big companies are not more important than our bodies. We are not here to trash the planet, ban round up

**Importance:** High

---

To whom it may concern,

I find it very troubling that this determination is being made without any consideration of the extreme volume of scientific literature available showing that at the correct rates, glyphosate is a safe and effective chemical to use.

It is quickly bound in soil, broken down by microbial processes, and has been used for decades without negative effects when used properly.

Please analyze the economic effects on the agricultural (including forestry) industries affected by this ruling.

Please consider what other chemicals will be used as an alternative if use of glyphosate is restricted.

Please consider the effect on food crops and invasive plant control, and the cost to develop new (potentially more dangerous) chemicals to control the spread of invasive plants.

Please analyze and respond to the cost of controlling invasive plant populations when we are restricted from using glyphosate. How will the biodiversity of CA be affected. Is there a plan by the state to increase funding for invasive plant control to account for higher control costs (more expensive chemicals, manual removal, etc.)?

Thank you for taking the time to respond to these important comments.

Hello,

I would like to voice my opinion on labeling Monsanto's Roundup product as a toxic substance. For many decades this chemical agent has been publicized as safe and effective, but has been proven to be very harmful to plants, animals, humans, and the environment. Please take steps to have this agent labeled and identified so we can reduce and eliminate this product from our society. Thank you.

In 1994 when i got my credential to work w/ severely handicapped kids, autistic kids were a small percentage of the students. We read that it was 1 in 100,000 with the disorder. In 2002 there were so many autistic kids that the district made adopted a special program because there were so many students and the pre-school class had an AM + PM group. Now that vaccination is no longer the culprit there is concern by many parents that toxins in our food, especially round-up could trigger the onset of autism. We should do everything we can to reduce cancer but if the current trend continues 1:2 boys will develop autism by 2030. Who will care for them and how can we compete as a nation with so many men disabled from early childhood. I don't have round-up in my water but the drought is concentrating toxins in the soils and making round-up a greater public danger. Please act!!

**Subject:** Prop 65

Greetings. I was reading about Prop 65. I am not a California resident. I reside in Oregon. The story can be proven with medical records.

My father was repairing the plumbing under the kitchen sink. He had taken everything out from the cabinet below. He thought he was lying in a bit of water on the floor. The Malathion had tipped over and leaked on to the floor below him. My mother came up and cried out, Edward! The pesticide bottle has spilled and you're laying in it! Dad said he would clean it up and take a shower. Mom insisted he see his doctor. He was told he would more than likely develop a blood dyscrasia.

My father later on had to get some blood drawn. They struggled and said his blood was like mud! Long story short, he ended up with an Oncology doctor. He was right. Polycythemia Vera. He was then told by the Oncologist that this would eventually lead to Leukemia. Gave him 5 yrs. 7 yrs later he was diagnosed with Leukemia. The Oncologist sadly was correct. He died. Why? Because of Malathion exposure! Even the cancer doctors knew what was to come of it! WHY! Why do they say these poisons are harmless! Unfortunately, my dad is not alive to tell you the tale.

Loving Daughter

I don't believe that the IARC has shown that Glyphosate is a likely human carcinogen. I think it could be a problem mostly for occupational exposure, however a lot of people who are exposed to Glyphosate in their jobs are also exposed to a whole host of other pesticides and chemicals. I don't think they've shown that the general public has much chance at all of having ill effects due to the amount of exposure the overwhelming majority of the general public would experience.

Glyphosate is a toxic chemical that affects soil, ground water, the food we eat, and it contributes to the rise of deadly animal species like Killer Rabbits! I once saw one of these beasts take down a gazelle at full gallop. All because of Round-Up! Fuckin Monsanto anyways. They are a scourge and a pestilence on this planet. If you choose to allow this sort of bullshitic nonsense to continue, well then, a pox upon your house and driveway.

What is a 'weed' anyways? It's nature's way of reminding us that mono-culture farming is a sick joke.

Pull your head out of your ass and do the right thing.

**Subject:** Monsanto's Glyphosate - add it to prop 65 list  
**Date:** Monday, September 28, 2015 10:55:23 AM

---

There seems to strong evidence that Glyphosate has links to cancer. For this reason alone, the product should be listed as a possible cancer causing chemical.

While this won't ban it for sale in California, it will be a step in the right direction.

Mega corporations like Monsanto are putting our health at risk and our agriculture industries in danger by cornering the market with products like Roundup and forcing smaller businesses to use roundup or face total crop loss.

There are other ways of growing without the use of Roundup and it's time for California to take these seriously.

**Date:** Monday, September 28, 2015 11:02:53 AM

---

Dear Ms. Esther Barajah-Ochoa,

I am writing to thank you and the Office of Environmental Health Hazard Assessment for moving to designate the toxic herbicide glyphosate as cancer-causing under Proposition 65.

There have been numerous studies showing that glyphosate has severe health risks including cancer and is detrimental to human health and the environment. Chemicals should not be used, until proven to be categorically safe.

I urge you to move forward with the plan to add Glyphosate to the list of carcinogenic chemicals under Proposition 65.

Yours sincerely,

Aseem Das

As a former public school counselor, who witnessed the routine spraying (sometimes as often as every two weeks) of Glyphosate on school grounds, during the school day, while students and school personnel were in close proximity to the spraying being done for weed control... I commend you for recognizing that Glyphosate is "known to cause cancer, birth defects and reproductive harm." The routine use of Glyphosate, along with other pesticides and herbicides... at public schools and public parks... puts everyone at risk, especially when no one is made aware of the toxic applications.

Since my physicians made me aware of the cancer-causing properties of pesticides and herbicides, and since I did not want to have a third encounter with cancer, I left my public school counseling position after 15 years... and wrote "Behind the School Wall," in order to alert others to the health risks that exist there.

Thank you for recognizing the dangers of Glyphosate, which also contaminates our food supply, and for your plans to label products that contain this cancer causing toxin.

California's Proposition 65, the Safe Drinking Water and Toxic Enforcement Act, requires manufacturers of every chemical known to cause cancer to carry a "clear and reasonable" warning label. Now that the World Health Organization's cancer research division (IARC) has declared glyphosate a probable human carcinogen, the OEHHA must add glyphosate to the agency's list of chemicals known to the state to cause cancer or reproductive toxicity.

**Date:** Thursday, September 10, 2015 1:05:29 PM

---

Dear Ms. Barajas-Ochoa and the Respected OEHHA Staff,  
I want to personally thank you from the bottom of my heart for recognizing the significant public health dangers posed by the four chemicals (glyphosate, malathion, tetrachlorvinphos, and parathion) listed in your notice of intent, with glyphosate and malathion (both receiving 2A classifications) of particular concern to me:

[http://oehha.ca.gov/prop65/CRNR\\_notices/admin\\_listing/intent\\_to\\_list/pdf\\_zip/090415NOIL\\_LCSet27.pdf](http://oehha.ca.gov/prop65/CRNR_notices/admin_listing/intent_to_list/pdf_zip/090415NOIL_LCSet27.pdf)

As one who has suffered for 5 years (and counting) after a pesticide overexposure at my former place of employment, I cannot tell you how grateful I am that some of these highly toxic, yet legal, poisons are finally getting the appropriate regulation that they require. After my overexposure, I became severely chemically sensitive and began to experience debilitating attacks of pancreatitis that my MD attributed through correlation, "exclusion of all other known factors," and references in the medical literature to these toxic exposures. I myself suspected the connection due to the fact that the attacks always seemed to occur after I was exposed to something noxious.

In any case, I wanted to applaud your integrity and bravery in bringing these issues to light and helping others to recognize the dangers of these chemicals before they suffer the same fate that I did. It should be noted that, to this day, I actually have to avoid many public trails and parks because of the widespread use of glyphosate to manage vegetation. This chemical seems to trigger my pancreas to flare up in painful spasms, and it also seems to cause chest tightness and breathing trouble when I am in proximity to the substance beyond a few minutes.

\*Should you have any questions or want more detailed commentary, I would be happy to provide it. I have a graduate degree from NYU in Public Finance & Policy with a concentration in healthcare.

Kind regards,  
Carrie L. Carrier

Dear Sirs,

I support California's EPA's decision to require glyphosate be labeled as a carcinogen.

If you levy a duty on dangerous agricultural chemicals such as this to inhibit their use, you will change the face of farming in favour of more sustainable practices. Better late than never.

With best wishes

Charles Bower

September 14, 2015  
To whom it may concerned,

It is with great surprise that the Office of Environmental Health Hazard Assessment plans to list glyphosate as a chemical "identified in the table below as **known** to the state to cause cancer..." There are numerous studies that report that glyphosate is not implicated as a carcinogen. I list some of them below.

As I am sure you know, it is very hard, or even nearly impossible to prove a negative, i.e., it is more difficult to show that something does not cause cancer than it is to show something causes cancer. Nevertheless, the peer-reviewed scientific papers listed in this letter do an excellent job of reviewing current literature or evaluating responses to glyphosate over a long period with an adequate sample size that the results statistically show that no association between exposure to glyphosate and cancer incidence. The choice to list glyphosate as a Prop. 65 chemical is wrong and in direct opposition to what research shows. Listing glyphosate as a Prop. 65 chemical is equivalent to acknowledging that vaccinating children causes autism or that climate change is not real despite overwhelming evidence to the contrary.

Sincerely,  
Cheryl A. Wilen, Ph.D.

I think if the EPA labels this as carcinogenic, it would be a HUGE step in the correct direction, and would no longer allow Monsanto to put it into our food supply via GMO corn and soybeans among other things. And through this process it would also disallow those crops from being saturated with Roundup, because those plants are immune to it, before it gets on our dinner table. I believe in this 100% because of my own personal experience, that being, that once I quit eating conventional fruits and vegetables and animals raised on GMO corn, my immune system re-stabilized, and 98% of my severe allergies (we are talking about being on shots and meds all year around and still suffering from hay-fever to asthma) are gone! And have stayed gone for 4 years now. Before I moved to the United States, from BC Canada, in 1985, I did not have severe allergies. Within 1 year of moving here, I was terrified that I might have to live in a bubble. I was suddenly completely allergic to my environment.

All the chemicals in our food supply, I believe wreak havoc on our immune system, which causes it to react unnaturally to the environment. Not only that, the chemicals themselves cause cancer. And the chemicals are in EVERYTHING! When you add up the glyphosate in our corn and our oil and on our fruits and vegetables and the BHT in our deodorant and our cereal (hmmmm thats odd isn't it?), and TbhQ preservative and cancer causing chemicals in suntan lotions (that we are putting on our skin to prevent cancer :-\)) and that is just to name a few - add sugar, and it isn't a surprise that 33-50% of us will get cancer, its actually amazing that more of us don't.

Please lets take steps to prevent cancer. There is no reason to have glyphosate in our food source. Lets get it out. Lets get the chemicals out completely. Maybe the decreased cost of funding all the sick people will more than make up for subsidizing the production and storage of food that isn't slowly poisoning us.

Christin Hards

*Dear Ms. Esther Barajah-Ochoa,*

*I am writing to thank you and the Office of Environmental Health Hazard Assessment for moving to designate the toxic herbicide glyphosate as cancer-causing under Proposition 65.*

*I also believe that we need to stop the growing of GMO foods on account of their related health dangers - since many of the GMO'S are created to encourage the use of glyphosate. To that end we will be submitting an ordinance to Sonoma County voters to ban the growing of GMO'S in our county for a vote on the November 2016 ballot. Hopefully we will join our neighboring counties of Marin, Mendocino, Humboldt, Trinity and Santa Cruz in the banning of these untested plants.*

*I urge you to move forward with the plan to add Glyphosate to the list of carcinogenic chemicals under Proposition 65. You have my full support.*

*Yours sincerely,*

*Guy Erdman, Treasuer Citizens for Healthy Farms and Families*

Phone: [\(916\) 445-6900](tel:(916)445-6900)

RE NOIL: GLYPHOSATE, TETRACHLORVINPHOS, PARATHION, MALATHION

Dear Ms. Barajas-Ochoa:

My name is Garen Gouveia, owner of Corporate Kids Events, Inc & I strongly support OEHHA's Notice of Intent Letter (NOIL) to add Glyphosate (both an antibiotic and an herbicide) and Malathion as Group 2A (probable carcinogen to humans), and Tetrachlorvinphos and parathion as Group 2B (possible carcinogen to humans) to California's Proposition 65 list.

Many of us in the organic gardening community have become sick & some of us have died of cancer. These are people that have healthy, active lifestyles! This should not be happening!! In addition, our company does over 300 childcare events for the Military, Government and Non-profits annually. We take care of over 15,000 children annually. The amount of asthma & respiratory issues is alarming! The amount of sick children is disgusting. Many of us have had blood & urine tests and they are showing high levels of metals & chemicals. PLEASE help us out.

Wishing you Love, Health & Happiness,  
Garen Gouveia, CEO Corporate Kids Events, Inc

To Whom It May Concern:

I read with interest news of the "notice of intent" to label several pesticides, including glyphosate, under Proposition 65. I welcome this news and encourage you to pursue this labeling, especially in light of the designation of glyphosate as "probably carcinogenic to humans" by the World Health Organization's International Agency for Research on Cancer (IARC). This pesticide has been used widely and indiscriminately for far too long and its safety is increasingly in question. It appears to negatively affect not only human health and well-being but also that of the soil and the many beneficial organisms that live in agricultural ecosystems.

Thank you for the opportunity to comment.

Sincerely,  
Danielle Montague-Judd

I object to your classification of Glyphosate as cancerous.

The The International Agency for Research on Cancer (IARC) report did not do a valid survey of the literature to make the claim of Glyphosate is a class 2a carcinogen. They selected 4 dated papers out of 1000s of possible papers. The papers they selected didn't even support the conclusion they came to. Many more recent studies had more reliable results and contradicted the studies selected by the IARC. If you want the proposition 65 labeling to have any meaning, then you will need to seek a better survey of the literature than was done by the IARC otherwise you open the state of California up to legitimate and wasteful lawsuits.

Additionally, do you plan on listing all class 2A chemicals and activities are cancer causing under proposition 65? If so, then prop 65 will have completely lost its meaning because it is too broad.

Dear Folks at Health Hazard Assessment,

I am extremely happy to hear that yet another very dangerous but widely used toxin is about to be more heavily regulated. It is badly needed and widely overdue. In fact it is profoundly disturbing that our federal agency, the EPA is so compromised by its dual and contradictory missions to regulate and promote, that it has been unable to do so. I am proud to see that my home state has recognised this need and stepped up to protect its citizens while at the same time sending a wider message to other Americans and the rest of the world that what they are eating and drinking has been made toxic to them, legally, and is in fact, perhaps being used by them on themselves!

Thank you,  
Dr. Carey Million

Dear CA EPA,  
I support labeling on Roundup, although I would never use such a product myself! It's a carcinogen and should be banned, but at the very least the label should indicate "known to cause cancer, birth defects or reproductive harm."

As a weed-killer, it's used on lawns that kids play as well as adults, pets etc. It's crazy to even allow such a product to be used on lawns and on food crops!

Sincerely,  
E Fleming

Dear Ms. Esther Barajas-Ochoa,

I implore you to act in the interest of human health and classify Glyphosate as a human carcinogen.

The research and conclusions drawn by organizations independent of the company's which make products need to be considered and acted upon.

The findings of the World Health Organization's International Agency for Research on Cancer in regards to Glyphosate should be taken seriously and immediate action should be taken to protect human health from this chemical.

Regards,

Elizabeth U. Mboutchom

**Subject:** NOIL glyphosate  
**Date:** Friday, September 18, 2015 11:54:39 AM

---

Dr. Don Huber, former professor at Purdue University, has shown and is showing information from research already completed, that glyphosates affect on soil biology and structure, is the cause that makes plants unable to prevent pathogens from attacking the plants. He has numerous examples of plant disease pathogens caused by glyphosate. He and other researchers have also shown that these plant pathogens have been transmitted via GMO feed to livestock. One in particular that causes abortions in dairy cattle. He has also reported human abortions from pathogens caused by glyphosates. Most disturbing of all is his information he shows of babies with major birth defects caused from the mothers drinking and being exposed to drinking and irrigation water contaminated with glyphosate. Dr. Don Huber has two, two hour videos that were recorded at the Grassfed Exchange 2013 and 2014 conferences. These can be obtained by going to their website at [grassfedexchange.com](http://grassfedexchange.com) or by contacting them at the phone number listed on the website. GLYPHOSATES SHOULD BE BANNED IN THEIR ENTIRETY. THE USE OF GMO PLANTS FOR FOOD AND FEED HAS CONTAMINATED ALMOST ALL OF OUR FOOD SUPPLY. You and the world NEED to watch his videos and check into the research from the people he quoted in his presentation. The research not done by and for Monsanto is continually showing that GLYPHOSATE IS A POISON AND THE WORLD'S WORST CONTAMINANT.

PS: Watching Dr. Hubers videos should make you sick to your stomach!

Sincerely,  
Ellen Reddick

To Whom It May Concern:

As a father of 2 kids, I ask that you list glyphosate as a Proposition 65 carcinogen. Living in Davis CA, surrounded by agriculture and being exposed to glyphosate which is both an herbicide and antibiotic, as a well as a probable carcinogen to humans as classified by the World Health Organization, exposes me and my family to unacceptable health risk. It poses a significant health hazard as a carcinogen and especially to those consuming vegetables that contain residual amounts of this chemical. The presence of glyphosate on produce also adversely impacts my family and friends health as antibiotics and glyphosate are known to alter the microorganisms of my body which likely leads to many other adverse health consequences for all who are exposed as determined by many members of the scientific community and the American Society of Microbiology.

It would make California families' lives healthier and safer if this is included on the States Proposition 65 list of probable carcinogens.

Many thanks,

Greg Williams, Ph.D.

Davis, CA, 95618

Hi,

I am writing to thank you and the Office of Environmental Health Hazard Assessment for moving to designate the toxic herbicide glyphosate as cancer-causing under Proposition 65. I have long been skeptical of this chemical (and all things Monsanto) and am happy to see steps taken towards recognizing its hazardous effects to human health. As a citizen and consumer, I rely on agencies like yours to monitor toxic chemicals such as this and hope that our interests are always at the forefront of any decision made.

I urge you to move forward with the plan to add Glyphosate to the list of carcinogenic chemicals under Proposition 65. You have my full support.

Thank you!

Indeed, IARC has identified glyphosate as a potential human carcinogen [1].

Glyphosate should therefore be listed for occupational exposure to those who handle and apply this herbicide which is potentially hazardous to human health.

I hope that California will not confuse this with the low-dose exposure of consumers who eat foods derived from crops sprayed with glyphosate.

There is no valid or substantial evidence that any adverse acute or chronic risk to human health may occur from dietary exposure.

Thank you,

- James

However,

The law calls for listing of "Substances listed as human or animal carcinogens by the International Agency for Research on Cancer (IARC)." [2]

It remains unclear which of the IARC groups [3] qualify.

I believe California should only require safety warnings when the level of certainty is high i.e. Group 1.

Since glyphosate is in IARC Group 2A I believe it should not be listed.

- James

Dear Sirs,

I was injured by Glysophate (Round - Up) at Gravinstein School in Sebastopol CA in 2001. I filed a late claim with the school district, and sued in the Santa Rosa court but lost, I'm not a lawyer; *the visiting judge* said it was indeed a late claim and wouldn't hear my case in 2003.

The school was spraying late in 2001 *after* the HEALTHY SCHOOL ACT was passed in 2000 with new rules for spraying, which the school had not adopted. I was dropping my son off at school and got covered in Glysophate as the handy man was spraying Round-Up from a 50 gallon barrel from a hose protruding from the back of a go-cart as the kids were arriving for school.

Four weeks after being sprayed I became crippled over-nite and am disabled to this day although that is not the way I present myself. After the spraying the ill-signs were there to see but I did not know them as being connected to the episode at the school.

The extreme bad cold. The ringing in the ear. The bad metallic taste in the mouth, Loss of memory, projectile vomiting in the middle of the night along with night-sweats, until that fateful night I woke up and couldn't walk anymore nor could I for another whole year, thus the late claim. All this information is available through my Dr..

After 14 years I have a dissolved left elbow and a fused right wrist.

I think Glysophate should be taken off the market ASAP. The product becomes even more dangerous for children because Monsanto's 'ROUND-UP' adds an adjuvant to the Glysophate which is another dangerous chemical that is meant to heighten the effects of Glysophate exponentially, making it extremely potent and dangerous to plants and children alike including damaging our DNA and the ability to absorb nutrition through the digestive track.

Essentially Glysophate kills a plants ability to present itself the next season or reproduce itself correctly again, this appears to go for people as well as plants.

Now there saying its cancer causing too which doesn't surprise me.

Janelle Kate Hart Swenson

---

Greetings:

I am a farmer. As much as I too would love to find the perfect herbicide so that I won't have to do any weeding, there are far too many risks associated with Glyphosate not to label it a carcinogen. I have read science which has shown that Glyphosate is responsible for killing soil bacteria which seeds clouds as well. In my opinion, we should not allow consumers to prevent the formation of clouds. My point is that there is no easy fix when dealing with weeds, and that a product as dangerous as glyphosate has no place in the hands of consumers to "spray liberally".

This brings up California Prop 65: Do consumers of vegetables grown using glyphosate need to be informed that the vegetables they bought are known to the state of California to have a carcinogen on them? That thought could restrict sales of conventionally grown produce by consumer choice.

You have a tough task. Thank you for allowing input from the consumers.

Sincerely,  
Jaret Johnston  
Fallbrook, California

**Subject:** Ban Monsanto's Roundup  
**Date:** Monday, September 28, 2015 10:54:31 AM

---

To whom it may concern,

Scientific evidence (real evidence, that is) shows that Roundup's main ingredient, Glyphosate, is a human carcinogen. It is destroying all life forms in the the soil, killing beneficial and necessary insects and other life forms, poisoning the waterways and acquires and causing disease in people. GMO, which are engineering to work with Roundup, have been banned in more than 60 countries (including Russia and China!) and most of Europe. Are these countries smarter than the US? It would appear so, unless there is massive corruption, deception and fraud being perpetrated against the American people by industry.

I urge you to ban Glyphosate in the United States as well as Roundup and other poisons that are wrecking havoc on the world and its ability to grow food. The claims that GMOs are a solution is blatantly false and will ultimately result in world food famines if not stopped.

Thank you for your consideration,  
Jason McGuire

**To:** [P65Public Comments](#)  
**Subject:** NOIL Glyphosate must go on the known carcinogen list  
**Date:** Sunday, September 20, 2015 1:01:03 PM

---

This chemical is too toxic to be used by the average citizen without a serious warning. A neighbor, a two time cancer survivor, bought a product that included glyphosate to control the weeds when her gardner was away on an extended vacation. The gardner became incredibly ill on return to the property. My neighbor did not know that the gardner had an autoimmune disorder that was triggered in a serious way by this chemical. The gardner, after recovering, refused to come back to the property that was so compromised by this product. Further, my neighbor did not understand that as an organic gardner the property and nearby properties had been compromised. So the gardner would not and could not work for other neighbors, thus losing income.

As someone who has been in the field of health and disability research for nearly 20 years, I shared what I knew about toxic chemicals and their cumulative, additive, and synergistic effects with other products. When I heard my neighbor's tale of woe, I shared with her the information that she should never be around this product as a two time cancer survivor.

This is a very dangerous chemical on many levels: vulnerable populations, children, elderly, those with compromised immune systems and their pets that may play in areas where it is used and bring it into contact with these vulnerable individuals and into their homes.

Others likely will comment on the dangers of this toxin to the pollinators of plants and trees such as bats, bees and butterflies, et al and the destruction of food crops dependent on pollination.

**From:** [Jodi](#)  
**To:** [P65Public Comments](#)  
**Subject:** Label herbicide with glyphosate as cancer causing.  
**Date:** Monday, September 28, 2015 10:57:50 AM

---

The science is irrefutable. Weed killers kill more than just weeds!

We must have accurate labeling.

Now that the World Health Organization's cancer research division (IARC) has declared glyphosate a [probable human carcinogen](#), the OEHHA is [proposing](#) that glyphosate, along with tetrachlorvinphos, parathion and malathion, be added to the agency's [list](#) of chemicals known to the state to cause cancer or reproductive toxicity.

Unfortunately, adding glyphosate to the Prop 65 list won't stop the sale or use of glyphosate in California. But it's a step in the right direction.

Even before the World Health Organization's declaration, scientists and physicians have warned that glyphosate poses a [health risk](#). The chemical has been linked not only to cancer, but also to liver and kidney damage and a long list of other chronic diseases.

According to the Center for Biological Diversity, use of glyphosate worldwide has [increased](#) more than 20-fold since 1990, and is now at an all-time high.

Documents recently uncovered at the U.S. Environmental Protection Agency archives show that Monsanto knew about glyphosate's cancer risks as early as [1981](#), when the company first submitted glyphosate to the EPA for approval.

Glyphosate, one of the most commonly used herbicides in the world, is [applied](#) to more than 150 food and non-food crops, and is commonly used on lawns, gardens and parks where pets and children play.

You MUST protect children, adults, animals and nature. That's your mandate.

Ban glyphosate. Or at the very least, label it.

Thank you,

Ms. Esther Barajas-Ocoa  
Office of Environmental Health Hazard Assessment

I write to support the agency's decision to label products containing glyphosate as carcinogenic. This is a critical step forward in our fight for a healthier environment and population. Glyphosate has been used cavalierly for too long and we are all suffering for it in various ways. When it is showing up in breast milk, as an example, it has become a serious problem. In addition to the recent WHO declaration of glyphosate as a probable human carcinogen, the use of glyphosate in wheat production to enhance harvest yield has been linked to the proliferation of gluten sensitivity and leaky gut syndrome. The dangers are legion. Accurate product labeling is necessary to support an informed and healthier public.

Thank you,  
*Karen Donaldson*

**Date:** Sunday, September 06, 2015 4:05:27 PM

---

The listing of glyphosate as a carcinogen on glyphosate labels is the correct action taken by OEHHA. The published scientific peer reviewed literature well supports the fact that glyphosate is indeed a carcinogen. In addition glyphosate is a potent endocrine disruptor and therefore a reproductive hazard and should be listed as such. Under the requirements of Prop. 65 the labeling of glyphosate as a carcinogen and reproductive hazard is the legally required and the correct action by OEHHA. The World Health Organization declared that glyphosate sprayed on GMOs likely causes cancer. And that should be enough for California's Department of Environmental Protection to decide that glyphosate should be added to the Prop 65 list.

"As far as I'm aware, this is the first regulatory agency in the U.S. to determine that glyphosate is a carcinogen," said Dr. Nathan Donley, a scientist at the Center for Biological Diversity.

I would like to see glyphosphate added to the prop 65 list of carcinogenic products ASAP.

Dear People,

Thank you for finally giving this toxin the attention it deerves-somewhat. But at least it is a start! Yes. Label it! This toxin causes much harm to our digestive systems, not only cancers but any other health problem that originate in the gut including psychological disorders and seizures.

Myself, I have had mysterious perforations in my intestine and had to have emergency surgery to remove part of my bowel. I have purged all non organic food from my diet, but this stuff is everywhere. Please do all in your power to get good science on this toxin and help your fellows and our planet.

California's Proposition 65, the Safe Drinking Water and Toxic Enforcement Act, requires manufacturers of every chemical known to cause cancer to carry a "clear and reasonable" warning label. Now that the World Health Organization's cancer research division (IARC) has declared glyphosate a probable human carcinogen, the OEHHA is proposing that glyphosate, along with tetrachlorvinphos, parathion and malathion, be added to the agency's list of chemicals known to the state to cause cancer or reproductive toxicity.

Please make sure this happens!

Best,

Liz Kennedy

Roundup should be kept on the list of dangerous chemicals because it pollutes and injures whatever it contacts. Our county has used it along roadsides to create ugly brown swatches of dead vegetation where wild flowers used to grow. Nothing grows now so that erosion is possible. That action takes glyphosate into the water stream. Our area relies on well water. The chain of poison goes on and on.

PUBLIC COMMENT ON GLYPHOSATE

**TO: Ms. Esther Barajas-Ochoa**  
**Office of Environmental Health Hazard Assessment**  
**P.O. Box 4010, MS-19B**  
**Sacramento, California 95812-4010**

Dear Ms. Barajas-Ochoa,

For more than 30 years Monsanto has held onto the knowledge that glyphosate is harmful, and specifically was implicated in causing cancer. Yet it's use has multiplied every year. What's worse is that this knowledge was also available to the EPA. How many women have developed breast cancer, for instance, after being reassured that Roundup was safe and anyway disperses into the environment within two weeks, as harmless breakdown products?

I personally was told this in the mid-eighties by a promoter of Roundup use in our Community Garden plots, over much objection. I did go on to be diagnosed with breast cancer in 2010.

I am not claiming proof of a connection: rather, it is up to Monsanto to prove their product does not cause serious harm, including cancer, not up to the public to prove that it does. And it is up to the EPA to stand with the public on this one, and immediately start the process of labeling all glyphosate with a strong warning similar to the warning on a package of cigarettes.

Thank you, M. Maia

**Date:** Sunday, September 27, 2015 1:28:00 PM

---

Dear California EPA Professionals,

I support the above chemicals being added to the Prop 65 List, because it's a step in the right direction to protect genetic life on our shared planet.

Genes have components which may be switched on or off by environmental exposure, or by a lack of a certain nutrient, for example, folate and Spina Bifida in children.

I am concerned about the effects of glycofosate on the roots of the plants which are impacted by the complexities of soil organisms. I have seen pictures of gmo corn plants exhibiting less rooting than a non-gmo corn plants. The soil from gmo plants, with administration of the herbicide glycofosate, appears compacted and lifeless. If a plant does not have a good rooting system, it will not take in adequate nutrients, and it is at greater risk to fail. Not to mention it may have less nutrition for whomever consumes the plant.

I grow organic fruits and vegetables at my home with the help of my daughter. We do our best to avoid products that are GMO.

Although I live in NY, the passage of Prop 65 will have a affect on the labeling of many products that are sold nationwide. I have seen many product labels that include Californian standards, and I applaud your state regulators for all they have done to protect consumers, and life forms on our shared planet. I liked what the Pope said, about "savage capitalism" and I feel the continued use of glycofosate, is a form of savage capitalism.

Thank you for this opportunity to comment.

I strongly support the listing of glyphosate on the Prop 65 list of cancer causing chemicals. I think the IARC arm of the World Health Organization performed a scientific analysis of the data on glyphosate. They found it to cause cancer in animals. They only declared it to be 'a probable human carcinogen' because there just wasn't enough data. It is unethical to try to induce cancer in humans and therefore there wasn't enough data.

RE NOIL: GLYPHOSATE, TETRACHLORVINPHOS, PARATHION, MALATHION

Dear Ms. Barajas-Ochoa:

The time is long overdue to add the above pesticides to California's Prop 65 list.

Regarding glyphosate in particular: Because approximately 90% of U.S. grown corn and soy are genetically modified to withstand an otherwise lethal dose of glyphosate, glyphosate residues are abundant in the U.S. food supply.

Moreover, glyphosate is also commonly used as a desiccant on non-GMO crops by farmers in order to facilitate uniform drying. This means that even if the crop is non-GMO (such as wheat) it can be contaminated with glyphosate residues.

For the safety of all Californians, I urge you to add the above pesticides to California's Prop 65 list.

Thank you for your time and consideration.

To Whom This May Concern:

I've worked with many dedicated individuals from the EPA on capital improvement water programs in the Bay Area. The EPA does some amazing work. That's why we're counting on those individuals within the EPA to protect our groundwater and environment from chemicals known to cause cancer, birth defects or reproductive harm.

I stand in support of labeling all products that contain glyphosate.

An informed citizen creates the basis for good decisions.

**Subject:** NOIL / Glyphosate Classification  
**Date:** Wednesday, September 09, 2015 11:33:04 AM

---

Dear Ms. Esther Barajas-Ochoa,

I write today to encourage you to help place Glyphosate in the correct classification, (cancer-causing) CARCINOGEN. You simply can't ignore the hard evidence that has been gathered as well as the fact that this is something CLEARLY causing horrific health disorders for so many people.

We the people just want things labeled clearly so that we can make decisions based on facts, not lies. What types of food do you have in your cupboards? Anything possibly containing this chemical? What do you feed your children, grandchildren and yourself? Cleaning this up really starts with you and other public officials in the position to actually make change.

I hope you take this under serious consideration and do the right thing by getting this chemical placed within the "Carcinogen" classification.

Sincerely,  
Fellow human and mother, Nichole

I believe that IARC has correctly identified glyphosphate as a potential human carcinogen.

During your review please consider these additional facts:

Environmental factors leading to carcinogenesis are poorly understood and cancers may appear only after many years of low dose exposure.  
Glyphosphate is extensively used in human environments and food production.  
Humans who have potential harmful environments are at risk of harm.  
Some humans use the OEHHA list to mitigate their risk of physical harm, by limiting their exposure to potentially carcinogenic substances.

Thus, if IARC has demonstrated a potential for carcinogenesis from glyphosphate exposure, listing it in OEHHA will give humans an opportunity to avoid a risk of physical harm.

---

To My Fellow Californian,

I wholeheartedly encourage you to add glyphosate to Prop 65. The importance of labeling this substance as a known carcinogen is paramount and cannot be postponed any longer!

Even when pumping gas one reads a label warning of carcinogens known to be in the area, and yet we still pump gas. While I was pregnant, I refrained from pumping gas as often as possible. Knowing something is a carcinogen or not does not mean that it will not be used, but it does raise public awareness of what a substance is.

Glyphosate is a perfect example of a substance that needs to come with a warning label. I would be grateful to know if it's classification.

Thank you,  
Rachel Benavidez

**Date:** Tuesday, September 08, 2015 12:49:22 PM

---

Ms. Esther Barajas-Ochoa,

I am contacting you today to urge you to go forward with the OEHHA's intent to list Tetrachlorvinphos, Parathion, Malathion, and Glyphosate as being known to cause cancer.

The argument that there are a lot of studies that have conflicting or ambivalent conclusions on their ability to cause cancer is reminiscent of arguments made by the tobacco industry for decades. "Correlation doesn't imply causation, which is why cigarettes don't cause cancer." Asbestos was safe, tobacco was safe, DDT was safe, Talc was safe, mercury was safe. All according to manufacturers, and yet, they aren't.

I believe the research shows concern about these chemicals it is warranted.

Best Regards,

*Rocio Simental*

To Whom It May Concern:

I strongly support any legislation that will alert consumers of potential carcinogens in their food. As a health educator, it would help immensely to have that support on labels, because people are convinced all they have to do is gently wash produce and it's free of any toxins when that's not necessarily true!!!! In my research I have also learned that glyphosate can also damage your brain function. I WOULD LOVE IT IF SOMEONE WERE TO ADD SOMETHING TO THAT EFFECT ON A LABEL IN ADDITION TO THE WORD CARCINOGEN. I would be happy to go find and send you the reports from those various studies that support the "loss of brain function" that consumption of glyphosate creates. Just let me know!

Thank you.

P.O. Box 4010, MS-19B  
Sacramento, CA 95812-4010

RE NOIL: GLYPHOSATE, TEETRACHLORVINPHOS, PARATHION, MALATHION

Dear Ms. Barajas-Ochoa:

One of the things glyphosate does is destroy minerals in the body including manganese. Manganese is important for ligament strength, and my son's dog's knee and hip ligaments are almost in need of surgery because my son was applying round up on his plants and she (the dog) would walk around the garden, absorbing it through her skin. Her vet tested and found glyphosate in her system and concluded this was one of the contributors to the dog's many problems.

Please don't allow glyphosate near people or animals, much less near the food we eat and air we breathe.

Thanks for listening.

Dear California State Official,

I am submitting comments in support of adding glyphosate to the list of chemicals on California's Safe Drinking Water and Toxic Enforcement Act (Proposition 65). It's been known for some time now that this chemical is unsafe for human consumption. It causes a multitude of health issues and cancer has now been added to that list. In a time where Monsanto is pouring millions of dollars into defeating any laws requiring labeling of foods containing GMO's it's refreshing to see that at least one state in our country is taking a stand against that. Americans have the right to know what the food we are eating contains. Thank you, California, for taking the lead on this initiative! I hope that you will vote to add this to the list, not just for the deserving residents of your great state but also for those of us across the rest of the U.S.

Respectfully,

Stephanie M. Shealy, P.E.

Senior Engineer

Thank you for taking this action to label glyphosate with a Cancer Warning. Bless your hearts for making the finding transparent and available to consumers, an action which will alert us to the risk involved before purchasing a product that contains this.

Moving to Sacramento after living in a farming community for well over 20 years, my husband has been an avid user, and remains still, of RoundUp on our 3/4 acre property. As you are aware, RoundUp is comprised of glyphosate. Our land was bordered by large farming communities which heavily spray their crops. When both my husband and myself were diagnosed with cancer, I shared my concerns with him about his heavy use of RoundUp and whether it was effecting our health issues. He was convinced the information printed on the RoundUP container, which clearly states the safety of it's use and that it carried no harmful effects, was perfectly safe. So he continues to heavily spray to this day.

We never found out exactly what caused the cancers, but maybe if the truth had been available to us that glyphosate is a carcinogenic, we would have made a wiser decision in our purchase.

What concerns me now is the heavy use of this carcinogenic weed killer used on our produce. If you have ever witnessed how produce farms are sprayed, other than by planes ... long arms with sprayer valves on tractors travel over row upon row, drenching the produce, I cannot help but be extremely concerned. This stuff does not just disappear once it appears in the grocery isle.

Thank you again, from the bottom of my heart for taking this action.

Sincerely,  
Sharon Moreno

I am very much in favor of Prop 65 labeling on GMO food.

There are an abundance of studies that have shown that even modest amounts of glyphosate cause cancer in a very short time frame in lab animals. In contrast, lab animals fed non-GMO foods without glyphosate live normal lives with 3x greater longevity and little to no cancer.

Thank you in advance for standing up for our health,

To Whom It May Concern:

I would like to go on record that I think Glyphosate should be listed on the hazardous materials list under the provisions of Prop 65.

I am under the firm belief that anything that causes death in ANY species should be banned completely and that through education, people will realize that there are better options than killing what we don't want, like nurturing what we do. In permaculture, they say that you don't have a slug problem, you have a duck deficiency. Nature is all about balance and humanity can't control her. Any attempt to do so is a lesson in futility.

Hello,

My wife and I firmly stand behind the decision of California's Department of Environmental Protection that glyphosate should be added to the Prop 65 list. We concur in the strongest possible way!

***We therefore respectfully request that Roundup be added to the Prop 65 list of carcinogenic products and ingredients that pose a danger to our health.***

As you know, even the World Health Organization declared that glyphosate sprayed on GMOs likely causes cancer.

Please do not allow Monsanto's money to influence something that at least 90% of Americans want.

PLEASE, do the right thing.

Thank you,

***Steve & Terri Bernstein

**Subject:** Ban glyphosate!  
**Date:** Monday, September 28, 2015 10:51:35 AM

---

Please Ban glyphosate!

We need to stop this horrible poison contained in Monsanto's Round-up!

Here are just a few examples of why we need to stop poisoning California:

**ADHD:** In farming communities, there's a strong correlation between Roundup exposure and attention deficit disorder (ADHD), likely due to glyphosate's capacity to disrupt thyroid hormone functions.

**Alzheimer's disease:** In the lab, Roundup causes the same type of oxidative stress and neural cell death observed in Alzheimer's disease. And it affects CaMKII, an enzyme whose dysregulation has also been linked to the disease.

**Anencephaly (birth defect):** An investigation into neural tube defects among babies born to women living within 1,000 meters of pesticide applications showed an association for glyphosate with anencephaly, the absence of a major portion of the brain, skull and scalp that forms during embryonic development.

**Autism:** Glyphosate has a number of known biological effects that align with the known pathologies associated with autism. One of these parallels is the gut dysbiosis observed in autistic children and the toxicity of glyphosate to beneficial bacteria that suppress pathogenic bacteria, along with pathogenic bacteria's high resistance to glyphosate. In addition, glyphosate's capacity to promote aluminum accumulation in the brain may make it the principal cause of autism in the U.S.

**Birth defects:** Roundup and glyphosate can disrupt the Vitamin A (retinoic acid) signaling pathway, which is crucial for normal fetal development. The babies of women living within one kilometer of fields sprayed with glyphosate were more than twice as likely to have birth defects according to a study from Paraguay. Congenital defects quadrupled in the decade after Roundup Ready crops arrived in Chaco, a province in Argentina where glyphosate is used roughly eight to ten times more per acre than in the U.S. A study of one farming family in the U.S. documented elevated levels of glyphosate and birth defects in the children, including an imperforate anus, growth hormone deficiency, hypospadias (an abnormally placed urinary hole), a heart defect and a micro penis.

**Brain cancer:** In a study of children with brain cancer compared with healthy children, researchers found that if either parent had been exposed to Roundup during the two years before the child's birth, the chances of the child developing brain cancer doubled. **Breast cancer:** Glyphosate induces human breast cancer cells growth via estrogen receptors. The only long-term animal study of glyphosate exposure produced rats with mammary tumors and shortened life-spans.

**Cancer:** House-to-house surveys of 65,000 people in farming communities in Argentina where Roundup is used, known there as the fumigated towns, found cancer rates two to four times higher than the national average, with increases in breast, prostate and lung cancers. In a comparison of two villages, in the one where

Roundup was sprayed, 31 percent of residents had a family member with cancer, while only 3 percent of residents in a ranching village without spraying had one. The high cancer rates among people exposed to Roundup likely stem from glyphosate's known capacity to induce DNA damage, which has been demonstrated in numerous lab tests.

**Celiac disease and gluten intolerance:** Fish exposed to glyphosate develop digestive problems that are reminiscent of celiac disease. There are parallels between the characteristics of celiac disease and the known effects of glyphosate. These include imbalances in gut bacteria, impairment in enzymes involved with detoxifying environmental toxins, mineral deficiencies and amino acid depletion.

**Chronic kidney disease:** Increases in the use of glyphosate may explain the recent surge in kidney failure among agricultural workers in Central America, Sri Lanka and India. Scientists have concluded, "Although glyphosate alone does not cause an epidemic of chronic kidney disease, it seems to have acquired the ability to destroy the renal tissues of thousands of farmers when it forms complexes with [hard water] and nephrotoxic metals."

**Colitis:** The toxicity of glyphosate to beneficial bacteria that suppress clostridia, along with clostridia's high resistance to glyphosate, could be a significant predisposing factor in the overgrowth of clostridia. Overgrowth of clostridia, specifically *C. difficile*, is a well-established causal factor in colitis.

**Depression:** Glyphosate disrupts chemical processes that impact the production of serotonin, an important neurotransmitter that regulates mood, appetite and sleep. Serotonin impairment has been linked to depression.

**Diabetes:** Low levels of testosterone are a risk factor for Type 2 diabetes. Rats fed environmentally relevant doses of Roundup over a period of 30 days spanning the onset of puberty had reduced testosterone production sufficient to alter testicular cell morphology and to delay the onset of puberty. **Heart disease:** Glyphosate can disrupt the body's enzymes, causing lysosomal dysfunction, a major factor in cardiovascular disease and heart failure.

**Hypothyroidism:** House-to-house surveys of 65,000 people in farming communities in Argentina where Roundup is used, known there as the fumigated towns, found higher rates of hypothyroidism.

**Inflammatory Bowel Disease ("Leaky Gut Syndrome"):** Glyphosate can induce severe tryptophan deficiency, which can lead to an extreme inflammatory bowel disease that severely impairs the ability to absorb nutrients through the gut, due to inflammation, bleeding and diarrhea.

**Liver disease:** Very low doses of Roundup can disrupt human liver cell function, according to a 2009 study published in *Toxicology*.

**Lou Gehrig's Disease (ALS):** Sulfate deficiency in the brain has been associated with Amyotrophic Lateral Sclerosis (ALS). Glyphosate disrupts sulfate transport from the gut to the liver, and may lead over time to severe sulfate deficiency throughout all the tissues, including the brain. **Multiple Sclerosis (MS):** An increased incidence of inflammatory bowel disease (IBS) has been found in association with MS. Glyphosate may be a causal factor. The hypothesis is that glyphosate-induced IBS causes gut

bacteria to leak into the vasculature, triggering an immune reaction and consequently an autoimmune disorder resulting in destruction of the myelin sheath.

**Non-Hodgkin lymphoma:** A systematic review and a series of meta-analyses of nearly three decades worth of epidemiologic research on the relationship between non-Hodgkin lymphoma (NHL) and occupational exposure to agricultural pesticides found that B cell lymphoma was positively associated with glyphosate.

**Parkinson's disease:** The brain-damaging effects of herbicides have been recognized as the main environmental factor associated with neurodegenerative disorders, including Parkinson's disease. The onset of Parkinson's following exposure to glyphosate has been well documented and lab studies show that glyphosate induces the cell death characteristic of the disease.

**Pregnancy problems (infertility, miscarriages, stillbirths):** Glyphosate is toxic to human placental cells, which, scientists say, explains the pregnancy problems of agricultural workers exposed to the herbicide.

**Obesity:** An experiment involving the transfer of a strain of endotoxin-producing bacteria from the gut of an obese human to the guts of mice caused the mice to become obese. Since glyphosate induces a shift in gut bacteria towards endotoxin-producers, glyphosate exposure may contribute to obesity in this way.

**Reproductive problems:** Studies of laboratory animals have found that male rats exposed to high levels of glyphosate, either during prenatal or pubertal development, suffer from reproductive problems, including delayed puberty, decreased sperm production, and decreased testosterone production.

**Respiratory illnesses:** House-to-house surveys of 65,000 people in farming communities in Argentina where Roundup is used, known there as the fumigated towns, found higher rates of chronic respiratory illnesses.

Thank you,  
Steve Chandler

RE NOIL: GLYPHOSATE, TETRACHLORVINPHOS, PARATHION,  
MALATHION

Dear Ms. Barajas-Ochoa:

I live on Barnett Valley Road and am a long-time resident and voter in Sonoma County. I am writing to strongly voice my support for OEHHA's Notice of Intent Letter (NOIL) to add Glyphosate (both an antibiotic and an herbicide) and Malathion as Group 2A (probable carcinogen to humans), and Tetrachlorvinphos and parathion as Group 2B (possible carcinogen to humans) to California's Proposition 65 list. There is plenty of evidence of the carcinogenicity of these chemicals in experimental animals and they should be labelled anywhere they are used so citizens can make their own choices about whether or not we want these toxins in our bloodstreams. Which we DONT!

Thank you for recognizing the long overdue urgency to mandate to add

these deadly chemicals to the Prop 65 statewide list.

Sincerely, Stewart McBride, Sebastopol, CA

Dear Ms. Esther Barajas-Ochoa;

THANK YOU, THANK YOU, for taking action!!

Your office shall to become the first U.S. regulatory agency to recognize that glyphosate causes cancer by requiring products containing glyphosate to be labeled as "known to cause cancer, birth defects or reproductive harm." (Much applause ... ) Truly, I wish RoundUp could just be all together BANNED.

### *To Whom it May Concern*

It is important that The California Office of Environmental Health Hazard Assessment (OEHHA) label Monsanto Round up as a carcinogen. We, the public, are losing faith in our governmental agencies for there failure to protect our right to healthy living conditions. Labeling toxic ingredients in items sold to the public is what the agency was created to do. Please do your job and lead the way to restoring public opinion that government is not completely for sale to one of the highest paying lobbyist, Monsanto.

Thank you for your attention.

Not only do I agree that glyphosate should have a cancer warning, it should also be a controlled substance for the wide-spread damage it does.

Are you aware that in 2010, Monsanto was awarded a patent for glyphosate's use as an antibiotic? As little as 1ppm will kill all bacteria EXCEPT Listeria and Salmonella. Don't take my word for it, check Thierry Vrain.

I also found out that we spray ALL cereal grains and cane sugar with Roundup prior to harvest. It's a desiccant and supposedly makes it easier to harvest since these crops are not GMO.

Why is the public exposed to this? Why are we not told? Even if you can't get this passed, your agency should be screaming about this to at least show the public you're trying to do something about it.

Consumers are a powerful lobby against the retailers but also need the support of leadership.

Thank you.

Susie Barton

**Date:** Wednesday, September 09, 2015 2:54:13 PM

---

The Roundup label reads, "*Glyphosate targets an enzyme found in plants, but not in people or pets.*" This slogan is false. This 13-word slogan is also misleading because it creates the misimpression that glyphosate has no effect on people -- when we know it really causes cancer!! So, please consider this -- the 13-word slogan will necessarily contradict the Prop. 65 warning, *i.e.*, you cannot have a label that simultaneously claims "glyphosate causes cancer" AND "glyphosate has no effect on people." Therefore, if the Agency requires the Prop. 65 warning, then the Agency must ALSO require the manufacturer to strike the offending 13-word slogan from the Roundup label. :)

Dear OEHHA,

Agency's like the OEHHA have a responsibility to insure the safety of California citizens by notification of warning labels, and restrictions. Every citizen doesn't have the capability to research such hazards, but agency's like the EPA, FDA, USDA, WHO and the OEHHA all have that responsibility to insure the safety of all citizens by informing us of the latest truthful independent research available, free of corporate influence. Poisoning our world isn't an option, it doesn't belong to us or greedy corporations who seem intent on killing us all slowly with diseases.

More should be done, but adding glyphosate to Prop 65 is a step in the right direction.

Respectfully,

Tedd Kawakami

Dear Ms. Barajas-Ochoa:

I strongly encourage you to support the labeling of RoundUp - as a probable human carcinogen. The product should be removed from the market and never used again, but short of that, you need to make sure it is labeled correctly.

The evidence that glyphosate is a carcinogen is mounting, and it has also been linked to the massive death of bees and butterflies both of which are necessary for pollination and therefore food.

The fact that Monsanto has been able to inject this poison into our food supply is disturbing, but more disturbing is that the EPA has done so little to stop the distribution of RoundUp.

Please act in the public's interest and label this killing combination of chemicals. You grandchildren will thank you.

Sincerely,

Tom Shetterly

Dear Ms. Barajzs-Ochoa:

I support OEHHA's Notice of Intent Letter to add Glyphosate and Malathion as Group 2A (probable carcinogen to humans), and Tetrachlorvinphos and parathion as Group 2B (possible carcinogen to humans) to California's Proposition 65 list.

As a nutrition consultant, I directly work with clients in poor health. From the research I've done, there is no doubt that all the chemicals we are exposed to plays a part in America being one of the sickest countries in the world, in spite of all our technology and money. My own health fell apart at age 40, and I'm sure it was in part due to the toxic exposures I had as a teenager and young adult while picking pesticide-laden grapes in the Central Valley. Many of my Hispanic co-workers died early of cancer, and there is no doubt in my mind that being exposed to chemicals was part of the cause.

Please add the above chemicals to the Prop 65 list.

Thank you,

Dear OEHHA,

I find it interesting that you are listing the four chemicals under prop 65. Two of these chemicals have been found to be probably carcinogenic, and two have been found to be possibly carcinogenic. It seems like a leap to take a possible or probable listing and say it is for sure a carcinogenic compound.

I am also curious why you are seeking public comment on listing when you state "OEHHA cannot consider scientific arguments concerning the weight or quality of the evidence considered by IARC". The IARC report was the only source of information you list for making this designation. So shouldn't you be seeking comment on the literature used by the IARC to come up with these designations? Because without taking comments on the scientific validity of these claims, what basis would there be for comment either in support of disagreement with the listing? All comments would just be unfounded opinions.... I would love to bring up some of the questions that have been brought to light about how the literature used by the IARC to make some of these designations, but those comments would be ignored.

Since the report has come out, there has been skepticism from a fairly large portion of the scientific community about the report released by the IARC in particular when concerning Glyphosate. Currently the BFR in Germany is reviewing the report, to seek a second opinion on its claims. Also another registration review is currently being conducted by the US EPA. Personally I would like to see what these other two organizations have to say before it is listed as a known carcinogenic compound by California.

As a professor of biology (since 1981), author of over 180 peer-reviewed articles cited more than 20,000 times, and Fellow of the American Academy of Arts and Sciences, **I urge you to list glyphosate to your list of chemicals known to the state to cause cancer or reproductive toxicity.** The evidence is clear, despite perpetual industry obfuscation (obviously driven by billions of dollars in profits, rising by the minute). The World Health Organization's cancer research division (IARC) has declared glyphosate a probable human carcinogen, and California should as well.

In general, **I urge you to consider toxicity and carcinogenicity evidence that includes testing with complete formulations** including "EXTRA" ( inappropriately called "inert") ingredients on the pesticides are they are actually sold and applied, not only the so-called "active" ingredient. It is absurd, poor oversight, that the effects without the adjuvants are allowed to be included. With these included in real-world exposures, but often not in tests, I think far more chemicals would need to be listed.

I also urge a similar listing for tetrachlorvinphos, parathion and malathion, all of which I understand you are considering.

Sincerely,

Hello,

**I am sending this message to support the agency's decision to require glyphosate be labeled as a carcinogen. The chemical industry led by the evil Monsanto corporation is endangering food and water all over our country. The fact that dozens of countries have banned Round Up, GMO seeds and other dangerous forms of food tampering while here in the United States we have not is incredibly concerning. In fact, it is incredibly difficult to avoid foods that have been tainted by dangerous chemicals and GMO's. One day I would like to feel comfortable knowing that the food at my local grocery store is not covered in cancerous chemicals. I believe that labeling glyphosate as cancerous is a step in the right direction. Thank you.**

**William Clifford**

Dear Ms. Esther Barajas-Ochoa

Moms Across America thanks you for considering listing glyphosate as a Prop 65 carcinogen.

We mothers need to know if something could be even remotely harmful to our children to protect not only our families, but the future of our communities, California and the world.

Health issues in our children are sky rocketing.

1 out of 2 children currently have a chronic health issue in America. These health issues, which can include inflammation from autoimmune disorders and allergies, can lead to cancer.

Even ADHD, which affects million, can lead to Parkinson's and dementia, which have been linked to the neurotoxicity effect of glyphosate in a recent study.

1 out of 2 males and 1 out of 3 females are expected to get cancer in America today. This is outrageous and tragic. Something systematically environmental is causing this. This is not genetic and not normal.

Pesticide/herbicide sprayed food is something which is systematically shipped all over the country.

We believe, and there are hundreds of studies showing harm from glyhosate, which includes hormone disrupting, placental cell death, gut bacteria distruction and cancer cell growth properties, and more, which is sprayed on GMOs and on non GMO, non organic food as well as a drying agent, is the cause of the increase in cancer and health issues in America.

If this is true, we have a wonderful opportunity to stop and reverse the skyrocketing health issues by giving people the opportunity to avoid it.

Including glyphosate as a Prop 65 carcinogen means that consumers will be able to avoid a potentially cancer causing chemical and improve the health state wide.

Lowering health issues and health care costs is a win win. Please include glyphosate as a Prop 65 carcinogen.

The studies and propeties of glyphosate I refer to above are all on [www.momsacrossamerica.com/data](http://www.momsacrossamerica.com/data).

Thank you.

*Dear Ms. Esther Barajah-Ochoa,*

**I support the Office of Environmental Health Hazard Assessment agency's decision to require glyphosate be labeled as a carcinogen.**

*Thank you for moving to designate the toxic herbicide glyphosate as cancer-causing under Proposition 65. As consumers, we rely on regulatory bodies like the OEHHA to keep close watch on the chemicals that we are exposed to every day. By acknowledging the safety and health issues that a growing body of science has observed, California is once again taking the lead on a critical issue facing not just Californians, but consumers worldwide.*

*Yours sincerely,*

Zoe Schwartz
