Subject: Fluoride in our water

I am writing to express my opposition to fluoride in our water. Our family is very conscious and careful about what we eat and absorb. We do not believe that fluoride is safe for us to consume internally. There are other ways to administer fluoride (e.g., topically at the dentist where it is spit out and not ingested) and there are other methods to strengthen teeth (e.g., calcium). Our doctor informed us to not let our children ingest fluoride as it would be detrimental to their health. Even our dentist has told us not to allow our children to ingest fluoride as it is not healthy. Putting fluoride in our water is unhealthy and unethical.

Sincerely,
Kristi Olivas
