Subject: Fluoride and its Salts-Prop 65

I am writing in response to adding fluoride to the list of cancer causing agents with a resounding I SUPPORT!

Myself and My PTA District have done extensive research in the name of children and have found that ingested fluoride affects the pineal gland, and the bones, causing cancer, primarily in young boys. There has been numerous studies and documentation supporting these and other effects from ingested fluoride.

This information has not necessarily been publicized, and really needs to be. Being on the list of chemicals under Proposition 65 would be a huge step toward awareness.

Thank you for your consideration,

Marcie Pollock
