---

As a woman who is undergoing painful surgery, chemo, and radiation for breast cancer treatment, any product with a scintilla of carcinogen possibility should be banned and I will tell you all the water I have consumed over the last 25 years has been in water in plastic bottles!

With no family history of cancer, eating a good diet, I believe plastic bottles and other plastic products with Styrene has a very good chance of being one of the factors of my condition.

I have undergone 12 weeks of awful Chemotherapy, which should give pause to the promoters who deny the possibility of styrene causing cancer. Let us hope that these cavalier promoters will not suffer what I have been suffering.

Please remove Styrene from food and drink products.  
Sincerely, Nicolette Good.
