
Practical Decision-Making Tools for Identifying Safer Alternatives

Session Three

Questions for discussion

- What would you recommend that OEHHA do now to improve its ability to identify “bad actor” chemicals?
 - NOW – with existing resources?
 - Eventually, if additional resources or authorities?
 - What would you recommend that OEHHA do now to improve its ability to identify “safer” or “low hazard chemicals”?
 - Would this be different from the “bad actor” chemicals?
 - What would you recommend that OEHHA do to improve its ability to fill in data gaps for assessment?
 - Without new empirical data (i. e. with QSARs, etc.)
 - If the agency could require or compel or obtain new empirical data?
-
