Subject: Comment in support of listing TDCPP on Prop 65

Aug 9, 2011

Ms. Cynthia Oshita
P.O. Box 4010, MS-19B
Sacramento, CA 95812-4010

Dear Ms. Oshita,

I urge you to list chlorinated tris, TDCPP, as a carcinogen on the "Prop 65 list" of chemicals. TDCPP is widely used in furniture foam, automobiles, children's products and textiles, and has been detected in the environment, house dust and humans.

In 1977, TDCPP was banned from use in children's pajamas after it was linked to cancer and evidence showed it could be absorbed through the skin. Since that time, even more studies have linked this chemical to multiple types of benign and malignant tumors in laboratory animals.

We have sufficient evidence to list this chemical as a cancer-causing substance. I urge you to list this chemical on Prop 65 at your October 12-13 meeting.

Sincerely,

Mr. Carlos Nunez
