Subject: Ban Chlorpyrifos, A Dangerous Developmental Poison
Date: Friday, September 22, 2017 11:27:08 AM

EPA's assessment is also support for the classification of chlorpyrifos as a developmental toxicant, concluding that there is "sufficient evidence" that there are neurodevelopmental effects at low levels, and that current approaches for evaluating chlorpyrifos's neurological impact are "not sufficiently health protective."

Europe banned the use of this pesticide in 2008 already -- what are we doing in the US 10 years later?

Please classify chlorpyrifos as a developmental toxin and eliminate exposure to all.

Sincerely,

Dr. s.moeller

columbus, OH 43215
