Subject: ZERO is the proper "safe" level of Glyphosate
Date: Thursday, June 22, 2017 7:27:50 AM

Dear Ms. Barahas,

I am deeply concerned about the damaging effects of glyphosate on our environment, ecosystem, and our population -- both human and animal.

Studies have shown that glyphosate is a carcinogen and is the cause of numerous serious health issues.

I understand your committee is tasked with determining the "safe" level in our food and water today. Please set it to ZERO. No level is safe.

Thank you for your consideration.
