Please, we don't want pesticides in our food and environment. No level is acceptable!

You are taking away our right to live in a country where there are organic options. Pesticides are not the answer to feeding the world's populations. I live in a small town in Ct of 2500 people. Too many of us have health issues with food or our gastrointestinal systems. Many of our children have autism, ADHD or anxiety issues with these gastrointestinal issues.

The only thing that has improved my son's and my health problems was changing to an organic lifestyle and removing food allergens from our diet. I am 51 have no prescription medication or health diagnoses, while my immediate family members who don't eat organically all take medication for various health issues. The future of our children depends on all of us making the right decisions today!

Thank you,

Arlene
