Subject: Goldenseal Carcinogenicity
Date: Wednesday, May 27, 2015 7:16:15 PM

To whom it may concern,

The listing of goldenseal as a carcinogen is a travesty and an absurdity. The one study leading to consideration of this listing (Nat'l Toxicol Program Tech Rep Ser. 2010 Aug;(562):1-188) demonstrated carcinogenicity at *astronomically high levels* of goldenseal powder intake: 25,000 ppm, or 1400 mg/kg/day of goldenseal powder for *two years* is so far above any reasonable intake in humans that a carcinogenic outcome has absolutely no relevance to human health or safety. I strongly urge you to abandon the pursuit of listing goldenseal as a "carcinogenic" substance, especially in light of a significant body of literature demonstrating *anti-carcinogenic* activity and other health benefits of goldenseal.

Thank you for your time.

Sincerely,

David Wolfson, ND
