

INFORMATION ABOUT EATING FISH FROM ANDERSON LAKE (SANTA CLARA COUNTY)

Office of Environmental Health Hazard Assessment (OEHHHA)
California Environmental Protection Agency
August 2017

Why did OEHHHA develop an advisory for eating fish from Anderson Lake?

OEHHHA developed an advisory for Anderson Lake because of mercury and PCBs found in the fish caught from this water body. Anderson Lake is located northeast of Morgan Hill, in Santa Clara County. This advisory is part of an ongoing effort by OEHHHA to provide safe-eating advice for fish in different California water bodies.

Why should I eat fish?

- Low-contaminant fish are an important part of a healthy, well-balanced diet. The American Heart Association recommends eating at least two servings of fish each week.
- Fish are a good source of protein, vitamins, and are a primary dietary source of heart-healthy omega-3 fatty acids. Eating low-contaminant fish while pregnant may help the baby's brain develop.

Which chemicals are of concern for people eating fish from Anderson Lake?

- Mercury
 - Mercury is a metal that comes from natural sources, mining, and air fallout from burning coal and other fuels. It is the most commonly found contaminant in fish.
 - Too much methylmercury, the form of mercury found in fish, can harm the brain, especially in fetuses, babies, and children. Mothers can pass methylmercury to their babies during pregnancy.
 - Because fetuses, babies, and children are especially sensitive to mercury, OEHHHA has one set of advice for the amount of mercury-containing fish that women age 18-45 years and children should eat, and another set of advice for women 46 years and older and men 18 years and older.
- Polychlorinated Biphenyls (PCBs)
 - PCBs are industrial chemicals. While banned in the 1970s, they persist for many years in the environment and are still found in the air and water from spills, leaks, and improper disposal.
 - High levels of PCBs can cause health problems. Some forms of PCBs caused cancer in animal studies.

- PCBs can build up to very high levels in the skin, fat, and some internal organs of fish. That is why OEHHA recommends eating only skinless fillet (meat) of fish.

How did OEHHA determine the consumption guidelines for fish from Anderson Lake?

- OEHHA compared chemical levels in fish caught from Anderson Lake to levels that are considered safe for human consumption.
- OEHHA’s consumption guidelines balance the risks and benefits of fish consumption.

What does OEHHA recommend for people who want to eat fish from Anderson Lake?

- OEHHA recommends the amounts and types of fish that may be eaten each week as “servings.” A serving is about the size and thickness of your hand for fish fillets. Give children smaller servings.
- Women 18-45 years and children 1-17 years
 - Should not eat black bass species, Channel Catfish, or Common Carp
 - May eat:
 - 1 total serving per week of crappie or sunfish species
- Women 46 years and older and men age 18 years and older
 - May eat:
 - 1 total serving per week of black bass species, or Channel Catfish, or
 - 2 total servings per week of Common Carp, crappie, or sunfish species

What else can I do to protect my health and my family’s?

- Eat a variety of fish.
- Eat smaller (younger) fish of legal size.
- Eat only the skinless fillet or meat portion of fish.
- Thoroughly cook the fish, allow the juice to drain away.
- Learn about OEHHA’s guidelines for eating sport fish in California:
 - Visit www.oehha.ca.gov (click on “FISH”, then “Fish Advisories”), or call OEHHA at (916) 324-7572 or (510) 622-3170
 - Check the Freshwater or Ocean Sport Fishing Regulations booklets from the California Department of Fish and Wildlife, or visit <https://www.wildlife.ca.gov/Regulations>

A Guide to Eating Fish from Anderson Lake (Santa Clara County)

Women 18 - 45 years and Children 1 - 17 years

Sunfish species

Crappie

Channel Catfish

Common Carp

Black Bass species

1 total serving a week

Do not eat

Women 46 years and older and Men 18 years and older

Common Carp

Crappie

Sunfish species

Channel Catfish

♥ Black Bass species

2 total servings a week

1 total serving a week

What is a serving?

For Adults **For Children**

A serving is about the size and thickness of your hand for fish fillets. Give children smaller servings.

Why eat fish?

Eating fish is good for your health. Fish have omega-3s that can reduce your risk for heart disease and improve how the brain develops in unborn babies and children.

♥ = Fish high in omega-3s

What is the concern?

Some fish have high levels of mercury or PCBs. Mercury can harm the brain, especially in unborn babies and children. PCBs can cause cancer.
