

Dear Honorable Science Panel & OEHHA Staff,

Can you please provide a list of all the individual ingredients that comprise both rubber crumb and the rubber playground material. Can you also please clarify if most of the tire crumb material is coming from suppliers in China? If not, where.

Given what we do know about toxins contained in these tires, can OEHHA please consider creating signs on every field and playground in California that uses tire crumb with a precautionary warning. It's the least we can do, given the vulnerability of kids and others who play on these fields consistently.
